Homo sapiens began migrating from Africa between 70,000 — 50,000 years ago and would eventually replace existing hominid species in Europe and Asia. The field involves an understanding of the similarities and differences between humans and other species in their genes, body form, physiology, and behavior.

### Introduction to Human Evolution

A second wave of humans dispersed across the Sinai peninsula into Asia, resulting in the bulk of human population for Eurasia. One pattern is sure, human traits evolved at different rates and at different times, in a mosaic- some features skeletal, dietary establishing themselves quickly, others developing later tool making, language, use of fire. Primates have five digits on their forelimbs.

### Human Evolution: An Introduction to Mans Adaptations

Our key research partners are in East Africa and East Asia — especially in Kenya, China, and Indonesia. The period of human evolution has coincided with environmental change, including cooling, drying, and wider climate fluctuations over time. Volcanic eruptions and forest fires also altered the availability of food, water, shelter, and other resources.
