Fulfilling the potential of cancer prevention and early detection (eBook, 2003) [ne-x.uni.rf.gd]

CDMRP strives to identify gaps in funding and provide award opportunities that will enhance program research objectives without duplicating existing funding opportunities. Other Institutes of NIH Other institutes of NIH support some research related to cancer prevention and early detection.

Fulfilling the Potential of Cancer Prevention and Early Detection: An American Cancer Society and Institute of Medicine Symposium

Recent research strongly suggests that two doses, and perhaps even a single dose, of the current vaccines may be sufficient to induce long-term protection in young adolescents. Since December 1998, more than 30 evidence-based reports have been released.

American Cancer Society Prevention, Early Detection, and Survivorship Guidelines

Another challenge is that, theoretically, ctDNA may be released by a tumor before the tumor can be detected definitively with current imaging technologies, raising questions about how patients with detectable ctDNA but no tumor detectable by imaging would be managed medically.

Fulfilling the potential of cancer prevention and early detection (eBook, 2003) [ne-x.uni.rf.gd]

A service of the National Library of Medicine, National Institutes of Health. Evidence-based prevention services should be available in these and other public programs.

Publications

Improving professional education and training would seem an obvious remedy to this lack of counseling and screening advice, but evidence

suggests that although improved education and training are necessary, these improvements by themselves are not sufficient to improve practice. Effective strategies are especially needed to encourage healthy behaviors among children and their families, medically underserved populations, and the public at large through multicomponent interventions.

National Programs to Prevent and Control Cancer

Findings, policy implications, and recommendations. Virtually all 96 percent of the responding programs expected medical students to be able to identify the age- and sex-specific recommendations for screening tests, prevention counseling, immunizations, and chemoprophylaxis.
