## Career Counseling

Readiness for Career Problem Solving And Decision Making An initial consideration in the application of the CIP model in career counseling is acquiring an understanding of two critical factors, complexity and capability, associated with readiness for undertaking the task of solving a career problem. For each goal, the counselor and client develop learning activities to attain the goal and identify resources used in the activities, estimate the time needed to carry out the activities, and establish priority in the sequence of goal attainments as well as an indicator or measure of their attainment.

## Devi Nina Bingham: Career Counseling

Autobiographies may also be helpful in describing and organizing life experiences that bear on the career problem at hand. Career Thoughts Inventory: Professional manual. The presence of a gap results in tension or discomfort that individuals seek to eliminate through problem solving and decision making.

## Devi Nina Bingham: Career Counseling

Additionally, these career goals might change over time. When career counseling takes place within comprehensive career centers, the acquisition of occupational knowledge may be facilitated through the use of a variety of media, such as print materials in the form of occupational briefs, vocational biographies, and reference books; special-topics books are an efficient means of acquiring factual knowledge about occupations, interactive media, and Internet Web sites.

## Cognitive Information Processing (Career Services)

These psychological variables must be adequately addressed by the work environment. In fulfilling this dual-role of vocational coach and counselor, a true collaboration takes place, and a stronger relationship is formed. The CTI may be used to identify specific phases in the CASVE Cycle in which a client is experiencing blocks in the career problem-solving process brought about by dysfunctional career thoughts.
