### American alligator

Not only have dogs been taken this way but and Florida panthers too. Alligators are frequently seen basking.

### American Alligator

The bright yellow cross-bands that juvenile alligators sport against a black background provide effective camouflage. Currently, SREL researchers work with alligators through long-term mark-recapture surveys, characterization of mating and paternity systems, and through studies on the effects of contaminants in long-lived reptiles.

35

John Johnson, North Bennington, Vermont. If the nest is 82-86°F, the hatchlings will be females, if the nest is 90- 93°F all the hatchlings will be male! These alligators can live to be 50 years old. Committee on Standard and English and Scientific Names.

### American alligator (*Alligator mississippiensis*)

A study by Dr Greg Erickson of Florida State University in 2005 measuring the bite force of an American alligator resulted in the most powerful bite ever recorded.

### American Alligator

Unsurprisingly the two biggest killers are the saltwater crocodile and the Nile crocodile, but also on the list is the American alligator. To warm themselves, alligators bask in the sun, which is when they are frequently observed on the banks of water bodies. The herpetofauna of Everglades National Park.

### American alligator (*Alligator mississippiensis*)

Indigenous populations may have simply been augmented by intentional introductions Conant, 1977.

## **American Alligator: Species Profile**
