Rainforest Soil

Deforestation reduces the moisture released into the atmosphere, causing rainfall to decrease. Should the rainforests be depleted, it could be that the medical cure for some diseases may disappear as well.

Rainforest Ecosystem: Definition, Characteristics, Types

Over two-thirds of all temperate rainforests are found in the Pacific Northwest. But what is rainforest ecosystem? First, fallen leaves, dead animal and plant matter decompose on the topsoil. The three-toed sloth is so well adapted to life in the trees that it can no longer walk on the ground.

11 Amazing Rainforest Animals

This is why the rainforest ecosystem receives heavy rain almost every year. Some of them include the Rainforest Alliance, The Nature Conservancy, and the Rainforest Action Network. Devastating hurricanes and typhoons occur periodically in some coastal regions toward the margins of the equatorial belt, such as in the and in parts of the western Pacific region.

Rainforest Soil

Amphibians, such as dazzlingly colored tree frogs, in the humidity because it keeps their skin moist.

Rainforest Soil

Such humid air produces extreme and frequent rainfall, ranging between 200-1000 centimeters 80-400 inches per year. Different from weather events, which are short-term and temporary phenomenon, climates are usually steady and predictable, and shape how organisms and human civilizations evolve and adapt in any given region.

Rainforests: Self

The soil of the rainforest appears red due to the presence of many amounts of iron content. Small, waxy leaves help trees in the emergent layer

retain water during long s or s.
