Heat

. These peraluminous, S-type granites are closely related to tin, tungsten, and fluorite deposits. A heat-flow map including volcanic heat estimated in this way, makes the heat flow in the Sunda Arc and the Philippines, where conventional heat-flow data are scarce, much higher than on a map without the volcanic heat.

Magnetic anomalies of east and southeast Asia and their linear features

Funding for its activities came mainly from the.

Coordinating Committee for Geoscience Programmes in East and Southeast Asia

ABSTRACT Desiring to increase development of their mineral and energy resource potentials and knowledge of geology of marine areas, a group of East Asian countries established a committee to promote, co-ordinate, plan, and implement geologic work programmes, and related activities. Space-borne image interpretation indicates two major faults: the north-trending Mae Hong Son and the northwest-trending Mae Ping.

Committee for Coordination of Joint Prospecting for Mineral Resources in Asian Offshore Areas (CCOP): Past, Present, and Future Role

In 1987, CCOP became an independent intergovernmental organisation, though it continued to receive considerable institutional support and project funding from the UNDP until 1991.

[PDF] Hydrocarbon Exploration And Production

It is supported financially mainly by its Member Countries, but also benefits from the financial and technical support of its Co-operating Countries as well as the Co-operating Organisations.

Magnetic anomalies of east and southeast Asia and their linear features

The trends suggest histories of origin and their subsequent deformations.
