Limnology of Big Lake, South

After treatment, a 25% average increase in the efficiency of Bear Lake to produce coho salmon smolt biomass was observed, and the composition of fingerlings that migrated as age-1 smolts increased by 30%. Google Analytic Metrics Additional publication details Part or all of this report is presented in Portable Document Format PDF. The vertical and seasonal distribution of chlorophyll in lakes of the Experimental Lakes Area, northwestern Ontario--implications for primary production estimates.

Limnology of Big Lake, South

Locations of limnetic sampling stations and bathymetry of Payette Lake, Idaho. Design I was used at Big Lake; chlorophyll- a concentrations were measured biweekly using a combination of in-vivo fluorometry and numerous discrete-depth samples.

Limnology of Big Lake, south

Geological Survey Abstract A recently completed limnological study of Payette Lake, Idaho, documented substantial hypolimnetic dissolved-oxygen deficits in the summer and autumn of 1995 and 1996. During 1984, an estimate was made of the lake's annual primary production.

Limnology of Big Lake, South

Evaluation of the graphical plots provided better insight into the interaction of physical, chemical, and biological processes throughout the water column. Deep-lying chlorophyll layers have been reported Fee, 1976; Priscu and Goldman, 1983; Pick, et al, 1984; and Woods, 1992.
