Fur, Feathers, and Flippers: How Animals Live Where They Do by Patricia Lauber

Once answered, the voice explains why or why not the animal does not suit that specific habitat. Because they live underground, excellent vision is not an adaptation that they need; badgers and moles often have poor eyesight.

How do Animals Survive in the Cold?

The tireless Lauber Be a Friend to Trees, p. Amazon and the Amazon logo are trademarks of Amazon. Two of her books, SEEDS: POP STICK GLIDE and

JOURNEY TO THE PLANETS, were nonfiction nominees for The American Book Award.

Fur, Feathers, and Flippers (How Animals Live Where They Do) by Patricia Lauber

And many animals huddle together in cold weather to share body warmth. During hibernation, their lungs and heart rate slows way down so as to not use much of the energy rapidly.

FUR, FEATHERS, AND FLIPPERS

All animals must be able to obtain food and water, protect themselves from harm, withstand the climate, and reproduce young so the species doesn't become extinct. They also have extra feathers on their legs and feet to help keep them warm.

Habitats

Animals and Where They Live. But what do animals do when it gets cold? You also may want to explore the Science Trek pages for specific animals that describe the adaptations that help them survive. Lauber looks specifically at five very different places: the seas around Antarctica, the grasslands of Africa, the New England forest, the desert Southwest of the US, and the far north tundra lands.

Animal Classification

These sensory adaptations include which allows bats to locate their prey by sending out sounds that bounce off other objects, and , which allows snakes to sense heat radiation from prey species at night. Snowshoe Hare Leaf Insect Gecko Sometimes coloring is an adaptation with a different purpose than camouflage. Habitats: Making Homes for Animals and Plants.

Animal Adaptation: Facts (Science Trek: Idaho Public Television)

Amazing Animal Habitats- A video about the very unique and interesting habitats where animals can live. How Do Humans Mimic Animal Adaptations? Animals develop these adaptations over time to match the environment where they live. These desert animals get all the moisture they need from the food in their diets.

Book Reviews, Sites, Romance, Fantasy, Fiction

Prey, Predator, and Scavenger Some animals eat other animals predators , some try to keep from being eaten prey , and others clean up the remains of dead animals. They breathe through their skin, absorbing oxygen from the surrounding air. The British population of the Grey Seal is two thirds of the worlds population.
