EPIDEMIOLOGY AND TREATMENT OF MONTEGGIA LESION IN ADULTS: SERIES OF 44 CASES

Jeder Arzt, der eine Fractur der Ulna in Behandlung bekommt, hat daher die Verpflichtung, auf eine allenfallsige Complication mit Radiusluxation seine Aufmerksamkeit zu richten. The LCP concept in the operative treatment of distal humerus fractures-biological, biomechanical and surgical aspects.

[Monteggia lesions in the growing skeleton: principles of therapy]

In children, the elbow is maintained at 90° or greater, in supination, until x-rays show evidence of healing. Postoperatively, the forearm was immobilized and rotated in supination by a long-arm cast for 4 weeks.

Monteggia fracture

Complications after surgery occurred in 21 cases. On examination, his right forearm was deformed, with his hand held in pronation and his elbow in 90° of flexion. Type 4: Fracture of the Ulna and Radius with Anterior Dislocation of the Radial Head Bado considered the type 4 lesion to be a type 1 lesion with a radial shaft fracture.

Monteggia's Fracture : Wheelless' Textbook of Orthopaedics

DISCUSSION We have reported one of the largest series of adult patients with Monteggia lesion and the first, to our knowledge, in Latin America. Komer J, Lill H, Josten C. The authors have no funding and conflicts of interest to disclose.

Monteggia fracture • LITFL • Medical Eponym Library

The outcome assessed by the Letts score was excellent in 80 %, good in 17 % of the patients and poor in only one patient 3 %. Several surgeries may be needed to correct this type of fracture as it is almost always a very complex fracture that requires a skilled , usually a specialist familiar with this type of injury.
