A 'gramophone' was the record player combined with amp system that played vinyl discs in the 40's to 70's.

**What are gramophones?**

These discs were double sided and usually had 16-20 songs per disc.

**What are gramophones?**

One of the earliest brands of gramophone sold was the Victrola. Now you can have all this on your Iphone! They were created a few years after Edison invented his phonograph that played cylindrical records to bypass both his patents by using a disk instead of a cylinder and his trademarks calling them gramophones instead of phonographs.

**What are gramophones?**

. I remember as a kid in the 50's my parents had a magnificent Grundig system and a collection of 4-500 vinyl lp's. Ultimately the gramophone design made the Edison phonograph design obsolete, but the name phonograph came to apply in the public mind to both designs and many people have completely forgotten the original meaning of the word gramophone.
