Recently discovered foot-prints of the Amphibian Age, in the Upper Coal Measure Group of Kansas City, Missouri. Fossil Lingula as indicators of environmental changes; example of a Lower Devonian bed in Spitsbergen. The sail's large surface area also meant heat could dissipate quickly into the surroundings, useful if the animal needed to release excess heat produced by metabolism or absorbed from the sun.

## Permian Red Beds at Lord Selkirk Park, PEI

We were not lucky enough to find fossils of any kind while we were there as our visit was so fleeting. A study in 2011 reduced that number to four, treating the fossils previously labeled as L. Huene considered it to be a manual ungual based on its curvature and believed it was a distinct specimen.

## Re

Food web Olson made many inferences on the paleoecology of the Texas Red beds and the role of *Dimetrodon* within its ecosystem. *Dimetrodon* belonged to the most primitive ecosystem, which developed from aquatic food webs. The skull was correctly identified, but the supposed humerus is a scapulocoracoid, the supposed radius and ulna are the basal fin elements, the wing itself is the pectoral fin with the feathers being its rays.
