Miracle of Healing Clay

A correspondence system, known as the College of Distance Education CODE covers grades 7 through 12 and is available to children who cannot find places in the high schools. Sodium benonite clays are the industrial clays used in things like: plaster, oil well drilling mud, cat litter, matches, cement tiles, lubricating grease, paints, copy paper, dynamite, shoe polish, concrete, cleaning agents, wall boards, crayons, and bleaching agents to mention a few. With ritual precision, the vestals awaken their miserable charges each dawn and roll them about on their beds of pain while performing ablutions, in the formal movements of which the maidens are highly trained.
