We will draw from the community of local experts at UBC, the Michael Smith Genome Sciences Centre, the Centre for Disease Control and the BC Cancer Agency in the fields of molecular pathology, molecular biology, microbiology, bioinformatics and genomics to offer an immersive introductory program on current state of the art and emergent technologies and their applications. Genomic medicine and lab medicine, especially pathology, are natural and symbiotic partners in the future of patient care. With the new understanding of causative agents, physicians began to compare the characteristics of one germ's symptoms as they developed within an affected individual to another germ's characteristics and symptoms.

For this reason, as well as their roles as and , generally have the largest body of research in veterinary pathology. Pathology and Laboratory Medicine is a dynamic academic department, providing world-class clinical care to our patients, fostering expanded basic science and research programs, innovating pathology education, and pursuing new advancements in patient care, teaching, and research. Nonetheless, significant amounts of pathology research are conducted on animals, for two primary reasons: 1 The origins of diseases are typically in nature, and many infectious pathogens have animal vectors and, as such, understanding the mechanisms of action for these pathogens in non-human hosts is essential to the understanding and application of and 2 those animals that share physiological and genetic traits with humans can be used as surrogates for the study of the disease and potential treatments as well as the effects of various synthetic products.

Dept. of Laboratory Medicine & Pathology

We pride ourselves on our enthusiastic, dedicated teachers, the comradery in our learners, and our devotion to the best of academic medicine.
