This technology offered the novelty of isolating the effect of ADP stimulation on the P2Y<sub>12</sub> receptor from that of the P2Y<sub>1</sub> receptor, by incorporating the effects of PGE<sub>1</sub> in addition to ADP. However, they can still see the changes that occur.

This strategy tested by our group with aspirin could be used for drugs providing potent and predictable platelet inhibition such as newer P2Y<sub>12</sub> blockers, while it would be more challenging with clopidogrel to distinguish resistance and non-adherence ,.

**Repeated intravesical injections of platelet**

However, bleeding into tissues eg. deep visceral hematomas or hemarthroses rarely occurs with thrombocytopenia; instead, patients usually have immediate and superficial bleeding following an injury. There are many causes of the platelet plug formation disorders that lead to pathological bleeding.
