THE FETAL GENITOURINARY SYSTEM

CT cystography is as accurate as conventional cystography in the detecting bladder rupture and may be used interchangeably with conventional cystography. Blunt renal trauma managed conservatively is associated with few intrahospital complications in the hemodynamically stable patients.

Abdominal Ultrasound: What It Is, Types, Details

Therefore, evaluation of dynamic images is important. Benign age-related perinephric stranding is usually bilateral and occurs mostly in persons older than 55 years. Abdominal wall muscular deficiency is responsible for the characteristic physical examination finding of a wrinkled or prunelike belly.

Genitourinary System

Glazer G, Filly R, Callen P: The varied sonographic appearance of the urinary tract in the fetus and the newborn with urethral obstruction. Normal ovaries in neonates and infants: a sonographic study of 77 patients 1 day to 24 months old.

Overview of Genitourinary Disorders

Hydroureter see proximal to an obstructing stone can be detected on noncontrast CT. Hematuria occurred in 38 patients. IVP is unreliable with a high false-negative rate for patients with penetrating trauma.

Diagnostic sonography of the fetal genitourinary tract

He now presents with flank pain and hydronephrosis, but no stones were seen on noncontrast CT. Both the anterior and the posterior urethra are opacified during a VCUG, and this is the only test to reveal the presence of posterior urethral valves. It can demonstrate likely ureteroliths, although it may fail to detect noncalcified stones.
