## Questia

Developmental studies of cerebral lateralization A pair of developmental studies appear to show large and striking differences in lateralization of language-related functions between male and female infants at three and six months of age. Edited by Joan Wallach Scott. Your readers will critique your arguments in part by assessing the values and assumptions your claims rely on.

For these critics the Freudianism in gender theory resexed women and relegated them to those libidinal, irrational, even hypersexual stereotypes that had heretofore characterized their rare appearances in history.

## Gender Spectrum

. In , Wallace switches up the way women and men are directed to look at the camera or not in photographs — whether to appear submissive traditionally feminine or dominant traditionally masculine.

## Historical Background

During the last decade of research, it has become clear that gender is a very complex category. The results: Women Men Powerful Powerless Powerful Powerless Modal tags 3 5% 9 15% 10 18% 16 29% Affective tags facilitative 43 70% 0 25 45% 0 Affective tags softeners 6 10% 0 4 7% 0 Total tags 61 55 First, in this database -- unlike in the SEU data -- there is no significant overall difference in tag usage between the sexes.

## Gender Shifts in the History of English

In many countries, particularly so-called economically developing countries, the legal rights of women still lag behind. All new verbs, whether derived from existing verbs or from nouns, belonged to the consonantal type. Similar patterns can be found in other countries.
