Standards for Performing Biofeedback

The Galvanic Skin Response meter GSR, also referred to as a Skin Conductance or Electrodermal Activity meter measures electrical changes in the skin, associated with sympathetic nervous arousal. More recent research has shown that the so-called stress response is really more complex than first recognized.

Biofeedback, Mind

Written informed consent must be obtained for non-validated uses of biofeedback. Reprinted with permission of Greenwood Publishing Group.

Biofeedback, Mind

Some devices used with biofeedback do not actually measure or feed back real-time information about a trainee. It is unethical not to have a chaperone present under these circumstances.

Standards for Performing Biofeedback

Before placing sensors in sensitive areas, the therapist must be certain that the client actually understands why this needs to be done.
