## Evaluations

Use of the BFCI has repeatedly been associated with improved breastfeeding and complementary feeding practices. We also found that lack of parental formal education was linked to development of under-nutrition with paternal illiteracy being shown to have a greater influence.

## Effect of a School Feeding Programme on Nutritional Status and Anaemia in an Urban Slum: A Preliminary Evaluation in Kenya

About 60% of mothers in Kenya gave their babies additional food as well as water within two weeks of birth. Background Sub-Saharan Africa has one of the highest levels of child malnutrition globally. Likewise, stakeholders should invest in interventions geared towards improving maternal knowledge, which will consequently improve infant feeding, nutrition and health status.

## Food For Education Kenya

In this study, there were more Muslim mothers in the control group compared to the intervention group. Impact of a community gardening project on vegetable intake, food security and family relationships: a community-based participatory research study. Policy implications A multi-sectoral approach is vital in tackling undernutrition in SSA.

## Prevalence of malnutrition in Kenya

Nairobi: Kenya Institute for Public Policy Research and Analysis. The standard diet provided in school meals comprises of a mixture of maize and beans at a ratio of 2:1 which is about 0.
