### Improve Observation

We have observed this transition at 495 GPa 4. To do so, arrange each smaller category into a sentence or two that will support the more general sentence you've just devised.

### Kansas vs Harvard

The year had 305 days made up of 30 and 31 days. While the concept of time effects our everyday lives, it eludes a simple definition. With our observations, we'll be helping out the eclipsing binary research being led by the and teams.

### Atmospheric Chemistry Modeling Group, Harvard University

Questions to Ask: Would it be possible to devise a calendar to improve on the present one? During the previous outburst, the technology did not exist to do really precise photometry and the time coverage was sparse, so there is still a lot of information about the system to be learned. Each final planned STS is posted on the public web soon after the schedule is approved for upload to Chandra.

### Everyday Classroom Tools: Introduction to the Threads of Inquiry

Just a glance could tell him just as much about the weather as any high-tech modern gadgets: if it's wet, it's raining; if it's white, it's snowing; if it's swaying, it's windy; and if it can't be seen, it's foggy.

### The Process of Leaf Color Change

The students then compare their constellations with others in the class, and hopefully learn from one another's work.

### PISCO: the Parallel Imager for Southern Cosmology Observations

For a plastic dome, use an adhesive dot or a grease marker. Your goal is to reduce your notes to no more than a page of category listings. Or can one be in light while the other is in darkness? In this activity, the students will play the role of the Earth and walk around the Sun to watch this

motion.

### **The Process of Leaf Color Change**

It takes about 26,000 years for the Earth's axis to precess a full circle and return to its starting place. Can they make a circular shadow from an oval-shaped object? Spider was circumscribed by spider ideas; its universe was spider universe. How can we have summer in the USA and winter in Australia at the same time, if they both turn toward the Sun once a day? Compare how the triangle gnomon measures the hours compared to how the vertical shadow stick measures the hours.

### **Outlining**

I think that that's another challenge that districts are going to be facing during this time.
