People practice agriculture on farms, on ranches, and in orchards all over the world.

#### An introduction to agricultural geography (Book, 1995) [ne-x.uni.rf.gd]

Farmyard manure, which contains nitrogen, potassium and phosphorus, was sufficient to maintain cereal yields at quite a high level. Not surprisingly students of agricultural geography have for a long time assumed that differences in the physical environment determine spatial variations in agricultural activity, and that regional differences in climate and soil give rise to distinctive agricultural regions or types of farming area.

#### agriculture

About 200 years ago the brought great changes to agriculture. Yet the study of agriculture receives relatively little attention from geographers.

#### Rural Geography

Catde produce five times as much meat as pigs, but the latter twice as much as sheep.

However, sea shipping is slow, and in our increasing demand for fresh food, food is increasingly being shipped by faster — and more polluting — means. When the land is cleared for cultivation, it is not as thorough as in most European farming, and only the hoe or the digging stick are used. Plantation Agriculture: The specialized commercial cultivation of cash crops on estates or plantations is a very distinctive type of tropical agriculture and is found in many parts of Asia, Africa and tropical and sub-tropical America.

Farming, with its multiple methods, has significantly transformed the landscape small or large fields, terraces, polders, livestock grazing, being an important reflection of the two-way relationship between people and their environments. A study of the Lammermuir Hills, south-east of

Edinburgh, illustrates some of the relationships between crops and altitude. Thus only very valuable crops can be grown.
