Step-by-step introductions using small examples lead to more demanding approaches illustrated by real world examples aimed at explaining interpretations. Written by leading experts in their field from four continents, this up-to-date, innovative text: covers the composition, structure, ecology, diversity, distribution and dynamics of plant communities, with an emphasis on functional adaptations to the abiotic and biotic processes governing plant communities; reviews the modern developments in vegetation ecology in a historical perspective; presents a coherent view on vegetation ecology while integrating population ecology, dispersal biology, biotic interactions, herbivory, interactions with soil organisms and ecosystem ecology; and tackles applied aspects of vegetation ecology, notably nature management, restoration ecology and global change studies.
