Multifactorial intervention type provides people with an individualised combination of two or more components from different intervention categories based on assessment of modifiable risk factors. Xin hua she da shi ji 1931. Therefore, the aim of this study was to systematically review falls prevention interventions for community-dwelling older people in Mainland China, to help inform policy and practice in a country with a rapidly rising burden of falls.

**Staff view: Zhongguo gong chan dang zu zhi shi zi liao hui bian :**

Single interventions were tested in 17 RCTs and 3 quasi-experimental studies, whereas multiple component interventions were tested in 47 RCTs and 15 quasi-experimental studies. Nearly 50% of the studies were implemented in high socioeconomic urban areas.
