4 Evaluating Hazards and Assessing Risks in the Laboratory

If less than a full-shift sample was collected, CSHOs should evaluate a nondetected result to determine whether adequate sampling was performed.

Classifying chemicals

Wet floors around ice, dry ice, or liquid nitrogen dispensers can be slippery if the areas are not carpeted and if drops or small puddles are not wiped up as soon as they form. Some flammable liquids maintain their flammability even at concentrations of 10% by weight in water.

OSHA Technical Manual (OTM)

The entire relevant standard s or code s should be consulted for complete information. The guideline also explains how approval may be obtained to use methods that are not discussed in those publications.

Classifying chemicals

GHS09—Environment Hazardous to aquatic life and the environment.

WorkSafeBC

Compounds that are known to pose the greatest carcinogenic hazard are referred to as select carcinogens, and they constitute another category of substances that must be handled as PHSs according to the OSHA Laboratory Standard. Where more than one pump will be used in the field, label the pumps to avoid mix-up. Dull edges are more likely to slip and cause harm.

Toxicological Profiles

Such hazardous products must be used immediately, be used in total, and be consumed entirely during the reaction.

Basic Information about How to Use SW

Contact of chemicals with the eyes is of particular concern because the eyes are sensitive to irritants.
