Since soil formation also requires organisms and organisms require water, reactions formation occur faster if there is sufficient water present. Many Gelisols in Arctic areas receive sufficient moisture to facilitate cryoturbation, while comparatively little occurs in drier Gelisols of Antarctica.

Soil Genesis and Classification

It Is Hoped That The Book Will Prove Immensely Useful And Informative To Students And Teachers Of Geology As Well As Soil Surveyors. Globally, large quantities of carbon are sequestered in Gelisols. Recent soil maps in Eaton, Ingham, Clinton, and Washtenaw Counties are being

used in the evaluation of modern remote sensing techniques for identification and mapping of soils.
