availability for various reactions, and with specific potential contributions to the pool of labile or available P in the soil.

biomass plantations: Topics by Science.gov

Our results show that the aboveground response to elevated CO₂ is affected significantly by intra- and interspecific competition, and that the elevated CO₂ response may be reduced in forest communities comprising tree species with contrasting functional traits. .

The influence of nutrition and density on repressed lodgepole pine

For example, successful and consistent establishment of hybrid poplar under most conditions requires 1 fall application of a contact herbicide

followed by ploughing and disking, 2 spring disking and application of a preemergent herbicide at the time of planting and 3 on some sites, post-planting cultivation or application of a contact herbicide⁷⁰ during the middle of the first growing season Hansen 1983. . .
