Deep sternal wound infection after cardiac surgery

Overall 30-day mortality and operative mortality in patients with DSWI according to whether re-exploration for postoperative bleeding.

Deep sternal wound infection after cardiac surgery

Some patients may experience this only when wearing tight or constrictive clothing.

Management of open chest and delayed sternal closure with the vacuum assisted closure system: preliminary experience

The outlook for this type of injury is usually quite good, with symptoms resolving over 3-6 months. Meanwhile, make sure you take enough precautions and do nothing to trigger hematoma formation.

9780412113710: Management of Bleeding After Open Heart Surgery (Medical Intelligence Unit Series)

Variability and predictability of large-volume red blood cell transfusion in cardiac surgery: a multicenter study. Cinefluoroscopy may also be useful in detecting restricted leaflet movement if a small thrombus at the hinge of a bileaflet valve is suspected. The most common form causes numbness in the hands, usually in the third, fourth, and fifth fingers.
