NIOSH Manual of Analytical Methods 4th Edition

No patient had iris melanoma in our series.

I

A stoichiometric conversion factor is used to calculate the amount of I 2 collected. This indicates the pressure drop across an orifice in the housing and is calibrated against a standard orifice on the intake. EPA environmental ambient air sampling - for U.

How should I sample for airborne iodine

Visual acuity, diameter and thickness changes during the follow-up period in both treatment groups were compared using independent t-test. No DE corrections are necessary for I 2 collection using IABC tubes. Iodine-125 irradiation of choroidal melanoma.

Iodine

The recovery study was not conducted so as not to confound the difficulty of generating very low concentration samples with the comparison of spiked samples with and without the sampling media.

Calibration Seed Sampling for Iodine

It is unknown what losses will occur at RH levels above 80%.
