Mamíferos

When new populations are imported or selectively bred by people, or when habitat modification brings previously isolated species into contact, extinction in some species, especially rare varieties, is possible.

Mamíferos: características, classificação, resumo

When first appeared in the evolution of mammals is uncertain, though it is generally agreed to have first evolved in non-mammalian. Em , dividiu os mamíferos, com base nessas características, em duas subclasses: os monodelfos e os didelfos e. New Delhi: Jaypee Brothers Medical Publishing.

Mammal

Mammals range in size from the 30—40 mm l. Some mammals have more vibrant colors; the has bright blue ridges on its muzzle which are produced by in facial fibers.

Mammaliaformes

Muitos mamíferos possuem glândulas de odor especializadas, as quais são modificações das sebáceas ou das apócrinas.
