

Isaac Newton Group, La Palma - Observers guide

RoyalGreenwich Observatory - Window on the universe: The view from La Palma's space volcano

Description: -

-Isaac Newton Group, La Palma - Observers guide

-Isaac Newton Group, La Palma - Observers guide

Notes: The Isaac Newton Group of Telescopes at the Observatorio de Roque de los Muchachos del Instituto de Astrofísica de Canarias is operated by the Royal Greenwich Observatory on the behalf of the Science and Engineering Research Council (UK) and the Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NL) - Title page.

Ground

The ING runs the highly-productive 4. Infrared absorption of dense helium and its importance in the atmospheres of cool white dwarfs.

A Broadband Wide

The emission of the mesospheric sodium layer is observed from a telescope located 160 m away from the laser. Unfortunately, the accuracy of the derived parameters is not good enough for the characterization of more massive or peculiar stars and is too low for seismic modelling.

The Isaac Newton Group

With a 840-Hz, sum frequency laser, have observed a 41—48 per cent increase. An outline strategy for future development of the telescopes at the Isaac Newton Group is presented.

Alkali metals in white dwarf atmospheres as tracers of ancient planetary crusts

The signal has been integrated along the transverse direction of the streak in order to increase the signal-to-noise ratio of these profiles. I've used it in a project with Gene Byrd and Mauri Valtonen to seek faint, tidally stripped companions of nearby edge-on galaxies, which would serve as tracers of the halo dynamics and history of these systems.

Window on the universe: The view from La Palma's space volcano

The potential of white dwarf cosmochemistry. A case study on WD2105-820.

User

I: method and application to ESO instruments. The spot dimension has been deduced from the transverse profile of the streak.
