**On the phylogenetic position of Pseudophilomedinae within Sarsielloidea (Ostracoda, Myodocopida), with a description of one new Harbansus from Ningaloo Reef and redescription of *H. paucichelatus* from Yucatan**

Fourth segment with one dorsal, bare and annulated seta exceeding distal end of the seventh segment.

## Angulorostrum monothrix

Most Harbansus species have relatively restricted distributions, except Harbansus paucichelatus Kornicker, in Inst Mar Sci 5:195—300, , which has also been postulated to represent a species complex. The NJ supports the position of Rutiderma apex as basal to all other Euphilomedes bootstrap value 87 % and E.

## Louis Sampson Kornicker

Shell more than 2 mm long ... H. Ecology and Classification of Bahamian Cytherellidae Ostracoda.

## Marine Species Identification Portal : Genus Angulorostrum

First endite with three setae: two short pappose and one longer seta; second with three pappose, annulated setae; third endite with five pappose annulated setae; fourth with five pappose annulated setae, end segment with three distal annulated pappose setae and three longer seta also pappose and annulated.
