## The Middle Jurassic Opalinuston Formation (Aalenian, Opalinum Zone) at its type locality near Bad Boll and adjacent outcrops (Swabian Alb, SW Germany)

Number of species, genera and families in relation to zones and subzones. The fauna is a mixture of *Brasilia* spp.

## Geochemische, sedimentologische und ökologische Untersuchungen im Braunen Jura alpha (Opalinuston) der Schwäbischen Alb : mit 14 Tab.

In the corresponding microconchs, variation is much greater. As mentioned in the introduction, it is long-known to occur in the upper part of the Opalinuston Formation, the Zillhausen Member. Bulletin of the Geological Survey of Ireland 4: 168—200.

## ::BioLIS:: Kobler HU (1972): Geochemische, sedimentologische und oekologische Untersuchungen im Braunen Jura alpha (Opalinuston) der Schwaebischen Alb

The bigger one shows a dense bead sculpture, which weakens gradually on the body chamber. Eine weniger stark ausgeprägte Änderung der Ostracoden-Gemeinschaft erfolgt innerhalb der Concavum-Zone, oberhalb der Calceola-Bank. Taxon classification Animalia Podocopida Cytherellidae 043E7EC6-D10A-5151-A605-3220D4963E5F Cytherelloidea lordi Ainsworth, 1986 Fig.

## DNB, Katalog der Deutschen Nationalbibliothek

Few, mostly very small ammonites. Thin-shelled bivalves, at the base in places in marl lenses abundant *Gryphaea calceola*. Biostratigraphie du

**The Middle Jurassic Opalinuston Formation (Aalenian, Opalinum Zone) at its type locality near Bad Boll and adjacent outcrops (Swabian Alb, SW Germany)**

Correlation of the biohorizons in SW Germany, S England and France. The furrows and pits as well as the ribs and depressions are covered with roundish secondary pits.

**Search Results**

Apostolescu V 1959 Ostracodes du Lias du Bassin de Paris. Ostracoda incertae sedis Taxon classification Animalia aff. Aalenian ostracods have also been described from Argentina Ballent 1991; Boomer and Ballent 1996; Ballent and Whatley 2000, 2009 and Iran Kochham et al.

**1. Introduction and previous studies**

Scale bar equals 30 mm. Matthias Franz, Regierungspräsidium Freiburg, Landesamt für Geologie, Rohstoffe und Bergbau, Albertstr.

**1. Introduction and previous studies**

The graphoceratid fauna of this bed itself is not diagnostic enough to decide definitely, if this bed should be placed in the youngest Gigantea Subzone younger than decipiformis biohorizon or in the oldest Concavum Subzone older than cavatum biohorizon. The unrecorded time makes them fairly well distinguishable from each other.
