Molecular Insect Science

However, little is known at the molecular level about mosquito-parasite interactions. The current work was undertaken to develop molecular genetic makers for the glassy-winged sharpshooter by various PCR-based DNA fingerprinting methods for the purpose of estimating the level of genetic variation within and among populations with the aim of achieving genetic information useful for improving biological control of this leafhopper.

Molecular Insect Science 2014 : Seventh International Symposium on Molecular Insect Science

No hemolin mRNA was detected in the feeding larvae in the middle of the last larval instar unless they were challenged by bacteria or injury.
