Natural operations on differential forms

Because these resources may be of interest to our readers, we present here a modified version of Stefanov's list as of November 18, 2009. Surveys and Monographs 53, Amer. More interestingly, there exists a full classification of binary invariant operators, this was done by Grozman around 1980, and is documented in.

Natural operations on differential forms

The Trillia Group participates in the initiative of the. Yano , Kinokuniya 1972 pp. In the background of this statement are the following general concepts.

Natural Operations in Differential Geometry

As an application, we also deduce a theorem, originally due to Kolář , that determines those natural differential forms that can be associated to a connection on a principal bundle. Cite this chapter as: Kolář I.

Natural operations on differential forms

Finite-dimensional differential geometry is the modeled on s and between them. Use MathJax to format equations. In: Natural Operations in Differential Geometry.

Later it was taken into consideration that certain geometric objects can be constructed on certain special types of manifolds only. The result implies that, unlike to the case of cotangent bundle, there is no natural symplectic structure on the tangent bundle.
