

Preliminary geomagnetic data, College Observatory, Fairbanks, Alaska - June 1985

U.S. Geological Survey - HAARP conspiracy

Description: -

-Preliminary geomagnetic data, College Observatory, Fairbanks, Alaska - June 1985

-

The uniform edition of the plays of J.M. Barrie

Open-file report (Geological Survey (U.S.)) -- 85-300F.

Open-file report / United States Department of the Interior, Geological Survey -- 85-0300F. Preliminary geomagnetic data, College Observatory, Fairbanks, Alaska - June 1985

ESRL Global Monitoring Laboratory

From 18 February to the end of the month the volcano was fairly quiet. Consideration of source effects is required when working in high-latitude warm polar regions, in the northern hemisphere Fig.

Every One Speaks about HAARP, but did you know..., page 1

These data indicated that the lava dome at the volcano's summit continued to grow slowly. Using a NOAA-12 IR image taken at 1542 UTC, Servanckx could not detect an ash signature in the split window. The Geophysical Institute made aircraft observations almost daily 8-18 February except the 10th and 14th.

Environmental Research Laboratories (U.S.)

Here's the temperature in the lowest kilometer of the atmosphere from the 3am AST Saturday sounding.

Presentations

Aerial and land-based surveys of Steller sea lions *Eumetopias jubatus* in Alaska, June and July 1999 and 2000. AVO raised the Concern Color Code from Orange to Red, the highest level.

Introduction

Cloud cover will periodically moderate temperatures somewhat east of 150W the next few days but only a slight, short lived warming of the airmass is now expected New Years Day.

Every One Speaks about HAARP, but did you know..., page 1

Sources: ; ; 18 January-24 January 2006 Observations made during an overflight on 18 January indicated that the summit was steaming vigorously, consistent with the formation of a new lava dome. This change indicated that steady effusion of lava and dome growth gave way to activity characterized by slower effusion of lava and intermittent block-and-ash-flows, rock avalanches, and rockfalls originating from the summit lava dome. Another explosive event began at 1430 on 28 January.
