Living End

Since joining you have tripled my net worth. If I remember correctly, the scientists then had demonstrated how a clinically dead cell can reconstitute its genome and return to life. Although diet, exercise, and lifestyle are all good things to do to lead a long healthy life, I have serious doubts that they can extend life much beyond current limit of about 125 years.

Inside the billionaire

Where is the self and consciousness then even though he or she is physically alive? But if we accept that death is a process changing multiple components of ourselves throughout life, then we also need to consider the possibility that the self is not the same self throughout life. The primary reasons for the significant improvement of the last 200 years were better public health and nutrition.

Human immortality: 4 ways science is cheating death

Besting Biology To win the biological battle against death, we must start by understanding the enemy.

Inside the billionaire

The food supplies would be limited. But would it work in human cells? Our sex drive slows down. People died either as children or in their prime, so aging and aged individuals were rare.

The Living End

This is not just a problem for somebody else in the future, unfortunately, it is a problem for you and me now. Imagine returning to your sexual peak. There is Reproductive death, Social death, and Psychological death.

The Living End

If everyone wanted to live forever, there'd be no future for our children and grandchildren. In the Tetrahymena, just like in humans, telomeres

degrade during cytokinesis.

Ageing process is unstoppable, finds unprecedented study

We as a global society have been remarkably successful at taming acute forms of death. Secondly, whilst Brown argues in favour of changes to medical research structures so that there are incentives in favour of treatments that extend healthy life rather than chronic disease, he has no suggestions for how this should be achieved.

Ageing process is unstoppable, finds unprecedented study

And this lifespan is increasing by 2 years every decade. These are radically different phases of life, as different as youth from middle age, or middle age from old age. .
