School and Departmental Seminar Information

Lithology is not the sole influence on debris torrent occurrence, of course.

Fluid Dynamics

It has been a critical issue for communities living close to airports since the introduction of turbojet and turbofan powered aircraft in civil aviation in the late 1960s and early 1970s.

Posters

The results indicate that air-filled resonators are a potential alternative to using encapsulated bubbles for low frequency underwater noise mitigation. Date of death was recorded for all subjects who died during the ten-year follow-up period.

Posters

It was also found that the flutter onset wind speed was increased with the width of slot at the center of the girder Fig.

The influence of bedrock type on the magnitude, frequency and spatial distribution of debris torrents on Northern Vancouver Island

An anti-erosive improving additive was introduced into seagoing ships. The rooms involved are acoustically benchmarked separately to enable relationships between the voice data and acoustic parameters to be investigated. Value of this resistance only criterion of belt puncture resistance assessment.
