Mechanical Behavior of a Rephosphorized Steel for Car Body Applications: Effects of Temperature, Strain Rate, and Pretreatment

Furthermore, temperature and strain rate effects were examined in terms of thermal and athermal components of the flow stresses.

Mechanical behavior of materials

. On the other hand it is important to find the effect of temperature on these properties. These models are validated by comparison to Taylor Impact Tests conducted on the same materials.

Journal of the Mechanical Behavior of Biomedical Materials

At 900°C the run-out stress was 120 MPa. The microstructures of these materials are generally based on tangled networks of fibers or on hollow cells Green, 1984, 1986. In this second edition, every chapter has been revised and updated to incorporate modern materials.
