The three functionalities require the following Python packages: i Numpy, ii os, iii multiprocessing, iv scipy, v numba, vi Matplotlib optional for plotting, and vii plotly optional for parallel coordinate plots. A well from Marcellus shale was analyzed by combining non-planar fractures, which were generated from a three-dimensional fracture propagation model developed by Wu and Olson 2014a, and the semi-analytical model. On the other hand, the vulnerability of all rules is increased.

These rules were also compared with the standard operating policy SOP, which is the simplest policy aiming to release a quantity of water demand if possible. Citation If you use VIC-ResOpt, please cite the following paper: T. The RA rule comprises three versions, as described in the RA rule section: RA-A, RA-B, and RA-C.
