## Radiation in Space and Astronomy

In April 1975, RERF was established under Japanese law as full successor to ABCC and was designated to continue the research according to an agreement between the Governments of the United States and Japan. Additional analyses of data from Interphone countries An analysis of data from five Northern European countries in the Interphone study showed an increased risk of acoustic neuroma only in those who had used a cell phone for 10 or more years.

## Radioactivity in the Ocean: Diluted, But Far from Harmless

Non-ionizing Radiation While ionizing radiation above gets all the press about being harmful to humans, non-ionizing radiation can also have significant biological effects.

#### Cell Phones and Cancer Risk Fact Sheet

Visible light is actually only a very small part of the electromagnetic spectrum, which is why it is important to study all other wavelengths in astronomy as to get a complete picture of the and to understand the physical mechanisms that govern the heavenly bodies.

Moreover, because of their radioactivity, they can be readily traced even in minute quantities with such detection devices as gamma-ray spectrometers and proportional counters. The below video is kind of an introduction to this page, and will highlight briefly the information available on this page.

But scientists agree that the governments of Japan, the United States, and other nations on the Pacific Rim need to ramp up studies of how far this contamination might spread and in what concentrations.
