Overview

This is often caused by lack of use or exposure to a language over time. This would cause learners to have more differentiation between the languages, leading them to be able to recognize the subtle differences between the languages that less proficient learners would struggle to recognize.

Understanding Language

There are three main categories of languages. For example, if neither feature B nor feature D can be acquired until feature A has been acquired feature B and D depend on A and feature C depends on B, but D does not depend on B or, therefore, on C , then acquisition orders A, B, C, D and A, D, B, C are possible, as they are both valid. Without the intent to discover this relationship, the would-be reader will not understand the task before her.

Second

It is broad-based and relatively new. Focus is directed toward providing proof of whether basic linguistic skills are innate nature , acquired nurture , or a combination of the two attributes.
