Mardi 3 décembre 2019, 11 heures 15, Salle 3052 Ivan Di Liberti Masaryk University Brno Topos theoretic approaches to formal model theory Accessible categories with directed colimits have proven to be a suitable framework to develop abstract model theory and generalize the notion of abstract elementary class, quite relevant in model theory. A potential feature of such data is contextuality including as a special case non-locality which can be neatly characterised in this setting. There is also a Weak Adjoint Functor Theorem, due to Kainen, and providing a sufficient condition for the existence of a weak left adjoint, where weakness refers to the existence but not uniqueness of factorizations.

REPRÉSENTATION SÉMANTIQUE ET INSERTION LEXICALE on JSTOR

Moreover, we give a precise characterization of containers whose interpretations carry a lifting monad structure. Cas particulier de la fouille textuelle La fouille textuelle consiste à transformer un objet « texte » en un objet « tableau », « arbre » ou « graphe » à l'aide de traitements sémantiques ou syntaxiques puis à appliquer des techniques de fouille textuelle sur cet objet formalisé.

Semantic Interpretation in Generative Grammar

Thus, there is only one notion of differentiation.

La sémantique générative

From the practical point of view, our results lead to a generic way of constructing theorem provers for different logics, all of them based on the same grounds. Thus modularity of timing is linked to entropy conservation of data flow, sharpening traditional entropy preservation guaranteed by the second law of thermodynamics for reversible systems.

Generative lexicon

Austin, l'un des initiateurs de la philosophie dite du langage ordinaire, a avancé qu'en parlant, une personne accomplit un acte, ou une action verbale comme déclarer, promettre ou s'excuser , et que le sens d'une expression réside dans l'acte qu'elle accomplit voir acte de langage. Many complex generative systems use languages to create structured objects. Mardi 21 novembre 2017, 10 heures 30, Salle 3052 John Baez UCLA

Riverside Compositionality in Network Theory To describe systems composed of interacting parts, scientists and engineers draw diagrams of networks: flow charts, Petri nets, electrical circuit diagrams, signal-flow graphs, chemical reaction networks, Feynman diagrams and the like.

La sémantique générative (Book, 1975) [ne-x.uni.rf.gd]

One can ask if there is an intermediate structure between n-fold categories and strict n-categories which is a model of weak n-categories. This idea to consider not computation but equalities on terms gives rise to the notion of lambda-theory.

La sémantique générative

In parallel, taking finite automata as the competence model of language, Gross developed the concept of local grammar.
